Retail Investment Strategy – EFSA priorities

Le European Forum of Securities Associations (EFSA)¹, qui regroupe les associations représentatives des activités de marché de l'UE et dont l'AMAFI est membre, a élaboré la note de position commune ci-jointe.

Cette note a vocation à présenter, de manière synthétique, les positions communes formulées par les associations membres de ce forum afin de contribuer aux réflexions actuellement menées par la Commission européenne sur une *Retail Investment Strategy* qu'elle entend rendre publique début mai 2023 et qui constitue l'un des piliers de son plan d'action sur l'Union des Marchés de capitaux lancé en 2020.

¹ Les membres de l'EFSA sont : pour la France, l'Association des Marchés Financiers (AMAFI) ; pour l'Espagne, Asociación de Mercados Financieros (AMF) ; pour l'Italie, Association of Financial Markets Intermediaries (ASSOSIM) ; pour les Pays Bas, Securities Dealers Association (DSDA) ; pour l'Allemagne, Federal Association of Investment Firms (bwf) ; pour la Belgique, Association of Stock Exchange Members (ABMB-BVBL) ; pour la Pologne, Securities Dealers Association (IDM) et pour la Suède, Securities Markets Association (SSMA).

Retail Investment Strategy – EFSA priorities

General comments

EFSA is a strong supporter of the policy objective of the CMU Action Plan on Retail Investment Strategy (RIS), i.e., to build retail investors' engagement and trust in EU capital markets.

However, it is important to underline that retail markets in EU differ; some are more sophisticated with a high degree of retail participation, whereas others are less mature. Therefore, when developing RIS, it is important to include proposals which are both targeted at facilitating and improving existing retail clients' **participation** on EU capital markets, and proposals which aim at encouraging participation of those who currently do **not yet participate** in the market, and for whom it is important to ensure continued access to advice and to increase financial literacy.

EFSA wants to emphasize the importance of ensuring that all amendments are subject to a **thorough analysis, consultation, impact assessment and consumer testing**. Focus should be on proposals which are evidence-based and bring a clear positive impact for retail clients, whilst avoiding proposals that could have unintended negative consequences for clients, investment firms or the EU capital market as a whole.

To ensure the competitiveness of EU capital markets it is furthermore important to consider the regulatory developments in UK. For instance, EFSA notes that it is under discussion to repeal PRIIPs and replace it with more flexible retail disclosure requirements.

Importance of different business models

According to EFSA, it is of utmost importance that the regulatory framework allows for different business models to co-exist. This means that retail clients should be able to have access to different types of services to serve their needs - both advisory and execution services – and that firms should be able to structure their fees according to how the local distribution network is organized in member states. A regulatory framework that is based on a "one size fits all approach" will not create a competitive and efficient EU capital market, especially given the existing diversity of business models. Moreover, the profile of retail clients differs among Member States with regards to wealth, financial and digital literacy as well as level of participation on capital markets.

Ban on inducements

EFSA does not consider that a full ban on inducement would be beneficial for the EU or consistent with the CMU objectives. In fact, we see clear risks that a ban would lead to advice gaps and limit product offerings to retail clients. Also, it would negatively affect the competitiveness of independent asset managers/investment firms to the benefit of larger institutions with in-house products. In addition, since there is no common interpretation across Member States about which payments are to be included in the concept of "inducement" or "third party payment", imposing a full ban could also have a number of serious unexpected consequences, e.g. for primary market transactions, with a negative effect on the real economy as a result.¹ We also strongly advise against taking the experience from the UK or the Netherlands as evidence for which effects a ban could have

1

¹ See article 41 delegated regulation to MiFID II which suggests that a placing fee/underwriting fee is an inducement in relation to endclient which receives investment services and ESMA technical advice: https://www.esma.europa.eu/sites/default/files/library/esma35-43-2126 technical advice on inducements and costs and charges disclosures.pdf

in the EU as a whole, since these two markets have specific features that differ from those in many other EU member states and also since the evidence is not overly positive.²

In the opinion of EFSA, it is important to keep in mind that the payment of an advice through inducement constitutes a cheap way for less wealthy clients to get access to advisory service that would otherwise not be available for them. Access to such services have become increasingly important during recent years, considering the complexity of disclosures required under EU-law, e.g. in the area of ESG-investments.

EFSA also wants to encourage EU policymakers to learn from the negative experience from the introduction of the MiFID II-rules on research unbundling. The financial research reform was imposed in MiFID II without clear evidence of a substantial market failure and despite the fact that the industry repeatedly expressed strong concerns that SME research coverage would decrease as a result of the new rules. Today, EU policymakers have realised that the desired outcome with unbundling rules was not achieved and are trying to fix the problem via Listing Act. However, since business models have already changed in EU it will be very difficult to get back to the starting point. In our view, this shows how important it is to take a cautious approach. In fact, instead of proposing a full ban on inducements, which could have very negative effects on the EU capital market, EFSA considers that focus should be to **improve the inducement regime within the current framework** by clarifying the rules and making them more proportionate, increasing the supervisory convergence (e.g., as regards "quality enhancement" criteria) and ensuring that fee disclosures become easier for retail clients to understand.

Appropriateness and suitability

In EFSA members experience, the MiFID II rules on appropriateness and suitability generally work well and we note that ESMA is doing a lot of work to increase the level of supervisory convergence. We were therefore very concerned by the Commission's targeted consultation in February 2022³ which suggested substantial changes to the current regime, without presenting any evidence of a market failure. In our view, it is very important that the MiFID II framework maintains the distinction between execution and advisory services, considering that these services serve different needs for clients. A requirement to provide retail clients who receive execution services with a list of suitable financial instruments and a personal asset allocation strategy could in fact give them the impression of having received advice. This could be confusing as well as give rise to liability concerns etc. In EFSAs view, what is needed in this area is not more detailed rules but rather to continue the work on convergence which should be combined with more effective supervision from the NCAs.

Additional aspects of importance for retail investors in EU

EFSA notes that **action 8** in the CMU Action Plan contains several topics which are important to include in the forthcoming RIS. In particular, we support:

- A review of the rules on cost & charges in MiFID II with the aim of reducing the complexity of the framework. Evidence show that retail clients are interested in price and total costs, not detailed breakdowns, or methods of calculation.⁴ It would also be welcome with closer alignment between PRIIPs/MiFID II, as suggested by ESMA⁵.

⁵ https://www.esma.europa.eu/press-news/esma-news/esma-makes-recommendations-improve-investor-protection

- A horizontal approach regarding electronic communications per default, i.e., that the MiFID II approach should be adopted in other regulatory frameworks as well. (If needed, this could be combined with a phase-in period to accommodate the needs of those member states which today have a very low level of digitalization).
- A review of Annex II to MiFID II as regards the conditions that increase the ability for sophisticated retail investors to be treated as professional clients for certain products or services.
- A clear mandate for ESAs to work with financial literacy e.g., develop educational material for retail clients and/or standard information as regards different types of financial instruments, meaning of sustainability preferences etc.
- Developing more fit-for-purpose product governance (PoG) rules, with nonpackaged/simple/plain vanilla instruments (bonds and shares) not being subject to this regime to encourage retail investments.
- Clarifying that the policy objective of EU frameworks relates to products used for
 investment purposes. For example, since the current PRIIPs scope is broader, the
 requirements are now appliable also to other instruments/purposes, e.g., hedging
 derivatives used to mitigate risk for SME corporates, which is not consistent with the
 intended objective.
